Operations is the Secret sauce

Operations as a Competitive Advantage

Just not Traditional Operations.

“How often does your team or teams release applications?”

Base (2018): 3,228 Developers

Base: 546-719 Developers who work for a software company, for internal IT, or in technology services

Source: Forrester Business Technographics Developer Survey, 2014-2018.

Hack Conway's Law

A group of people are in a workshop or meeting room. One person is standing and pointing at a wall covered in many sticky notes. Several other people are sitting on stools, looking towards the person pointing. The room has a modern, open-plan feel with large windows in the background. The word "CHANGE" is overlaid in the center in a large, white, sans-serif font, enclosed within a teal-colored rectangular frame.

Kubernetes Dashboard

What PKS adds to Kubernetes

**PKS
value-added
features**

Secure container registry

Secure multi-tenant ingress

Rolling upgrades to cluster infrastructure

Monitoring and recovery of cluster VMs and processes

Cluster provisioning and scaling

Embedded, hardened Operating System

Single tenant ingress

Rolling upgrades to pods

Pod scaling and high availability

Stateful Sets of pods

Multi-container pods

Persistent disks

**Built into
Kubernetes**

PKS Vision

*To provide enterprise customers with the ability to **safely** and **efficiently** deliver container services on their **preferred infrastructure** so that they can excel in their market with a cloud native platform*

A person with glasses and a dark t-shirt is sitting at a table, gesturing with their hands while speaking to two other people whose backs are to the camera. The scene is dimly lit, with a blue tint. The text is overlaid on the image.

**PKS does for your Kubernetes
what
Kubernetes does for your apps**

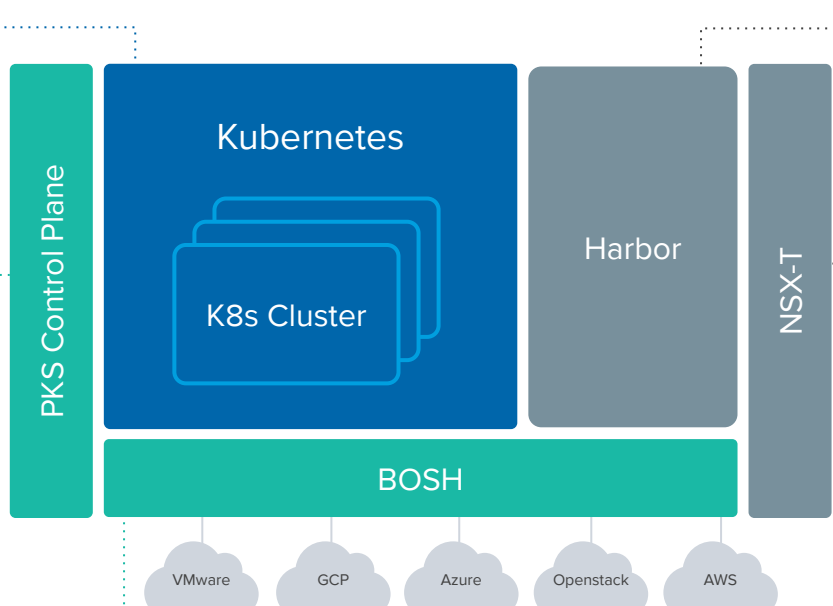

Enterprise-Grade Kubernetes

Built with open-source Kubernetes

Constant compatibility with the latest stable release of Google Kubernetes Engine—no proprietary extensions.

PKS Control Plane

Use the PKS CLI and API to create, operate, and scale your clusters.

Harbor

An enterprise-class container registry. Includes vulnerability scanning, identity management, and more.

NSX-T

Network management, security, and load balancing out-of-the-box with VMware NSX-T. Multi-cloud, multi-hypervisor.

BOSH

Reliable and consistent operational experience for any cloud.

A group of people in a workshop setting. One person is standing and pointing at a wall covered in sticky notes. Several other people are sitting on stools, looking towards the speaker. The scene is dimly lit with a blue tint.

Kubernetes

A group of people in a workshop setting. One person is standing and pointing at a wall covered in sticky notes. Several other people are sitting on stools, looking towards the speaker. The scene is dimly lit with a blue tint.

Controllers

Controllers make Kubernetes great.

Desired State
Actual State

Unix Philosophy:

Do one thing. Do it well.

A Kubernetes pod is fragile.

The **ReplicaSet** Controller
Adds resiliency to your **Pods**.

The **Deployment** Controller
Adds upgradability to your **ReplicaSets**.

You can write custom controllers
very easily.

Kubernetes is an API
for Operations

Operators extend Kubernetes
to support custom resources

<https://github.com/operator-framework/awesome-operators>

Controllers and Operators turn Kubernetes Into an API for Operations

A group of people are gathered in a workshop or meeting room. On the left, a man stands and points with a marker at a wall covered in numerous sticky notes. In the center, a group of four people (three men and one woman) are seated on stools, looking towards the man pointing. On the right, another man stands with his arms crossed, looking towards the group. The room has a modern, open-plan feel with large windows in the background. The entire image is overlaid with a semi-transparent dark blue filter.

Let's run Kubernetes

Kubernetes is a platform for building platforms. It's a better place to start; not the endgame.

1:04 PM - 27 Nov 2017

A man with glasses and a black t-shirt featuring a geometric logo is speaking to a group of people in a meeting. He is gesturing with his hands. The background is dark and out of focus.

**“Let somebody else
Do the hard stuff” - Me**

One Big Cluster or Many Smaller Clusters

One [or two] Big Cluster[s]

- All teams co-located on cluster, “namespaces” separate them.
- Higher chance of noisy neighbor, other multi-tenancy issues.
- Better utilization of resources (less servers, higher bin-packing)
- Cluster Upgrades affect everyone.
- Large Blast radius during cluster issues / outages.
- Monolithic approach to infrastructure

Many Smaller Clusters

- Each “team” or “business unit” gets its own cluster.
- Dedicated resources to each cluster reduces noisy neighbor etc.
- Resources can be customized at the cluster for the specific use cases.
- Cluster Upgrades only affect one team, easier to coordinate.
- Cluster issues/outages restricted to one team.
- Microservices approach to Infrastructure

One Big Cluster or Many Smaller Clusters

One [or two] Big Cluster[s]

- *Pivotal Container Service - Essentials*
- Kops
- Some Kubernetes distro from another vendor
- Kubespray
- DIY chef/puppet/ansible

Many Smaller Clusters

- **Pivotal Container Service - Enterprise**
- *Pivotal Container Service - Cloud*
- Google Container Engine
- Elastic Container Service
- Azure Container Service

<https://k8s.af>

Start with the idea of doing
many smaller clusters.
